Education

MIT Art, Design and Technology University

B.Tech in Computer Science and Engineering

Pune, India

Expected 2028

Experience

Mextropic AI

Sep 2026 – Present

Full-Stack Developer Intern

- Built and deployed the company website for an AI drug-discovery data startup using React, Vite and an Express API running as a Vercel serverless function.
- Developed REST endpoints for the data catalogue, campaign data and a rate-limited enquiry form, with request-size limits and CORS rules.
- Turned Figma designs into responsive React components, and shipped a second minimalist design variant for stakeholder review.

SuprSchool

Apr 2026 – Aug 2026

Full-Stack Developer

- Shipped features and fixes for a teacher and student school app built with Expo (React Native) and a TypeScript Express API on Supabase (PostgreSQL), released to iOS through TestFlight.
- Fixed real-time notification delivery end to end: repaired the Postgres-queue worker that crashed on its first message, built the realtime channel the client subscribed to, and routed events, assignments and diary posts to the right classes.
- Wrote contract tests that check every client API call against the server's routes, catching two endpoints the backend never served; added request timeouts, cursor pagination and idempotency keys.
- Reduced iOS releases to a single command with EAS Build/Submit profiles, and fixed keyboard avoidance, safe-area insets, pull-to-refresh and duplicate network fetches across tabs.

Bunkout

Jan 2026 – Mar 2026

Full-Stack Developer

bunkout.in

- Built the Next.js website for Bunkout, a stays and hospitality brand with 52K+ Instagram followers, presenting property listings, room galleries and menus.
- Designed an admin dashboard for managing listings and site content.

Projects

Redis Weather App | Node.js, Express, Redis, Docker, GitHub Actions

GitHub

- Built a forecast service that caches Open-Meteo API responses in Redis with a 10-minute TTL and falls back gracefully when Redis is down; containerized with Docker Compose and tested in GitHub Actions CI.

Nexus – Local LLM Chatbot | Python, Ollama, Gemma 2B

GitHub

- Built an offline chatbot on Gemma 2B that runs on a consumer GPU (RTX 3050), using a custom Ollama Modelfile for its persona and document Q&A instructions, with no cloud APIs.

Shaolin Baddie – Browser RPG | TypeScript, React 19, Phaser 3, Zustand, Tailwind

GitHub

- Built a 12-map pixel-art RPG with turn-based battles, missions and save states, generating all art and music procedurally at runtime with Canvas and Web Audio.

AltSelf – Personal AI Agent | Figma, React

- Designed the mobile and onboarding UI and built the web prototype for a permission-gated personal AI agent that asks approval for each exact action.

Technical Skills

Languages: TypeScript, JavaScript, Python, Java, SQL, HTML, CSS
Frontend: React, React Native, Expo, Next.js, Vite, Tailwind CSS, Zustand, TanStack Query
Backend: Node.js, Express, REST APIs, Zod, JWT authentication
Databases: PostgreSQL, Supabase, Redis, MongoDB, Drizzle ORM
DevOps / Tools: Docker, GitHub Actions, Git, Vercel, Netlify, EAS, TestFlight, Vitest, Figma
AI / ML: LLMs, Ollama, Claude Code (AI-assisted development)

Achievements

- Runner-up, National Battle of Bands, CBIT.
